

## JUMP-START YOUR REMOTE TEACHING SKILLS

We offer professional learning sessions to help launch your remote teaching and learning initiative.

Professional Learning Sessions	Description
<b>Principles of Effective Teaching for Remote Learning</b>	Learn to recognize and navigate differences in both the design and delivery of remote learning. Using sample tasks from our core programs, participants explore how effective remote learning should include teacher presence, student interaction, and purposeful independent work.
<b>Enhancing Remote Learning with Teacher Presence</b>	Discover the essential role that teacher presence plays in remote learning by using Savvas program resources to create videos and written messages to strengthen the rapport with students and supplement independent and collaborative student work.
<b>Enhancing Remote Learning with Student Interaction</b>	Explore routines and strategies that promote student interaction to enhance content and language development in a remote learning environment, while also cultivating meaningful student discourse and increasing student engagement through collaborative tasks.
<b>Enhancing Remote Learning with Purposeful, Independent Work</b>	Develop ways to turn independent work in a remote setting into an opportunity for students to personalize their learning, connect with family, and set and monitor goals.
<b>Enhancing Remote Learning with Conferring and Feedback</b>	Investigate approaches to achieve learning outcomes and personalize learning experiences through virtual conferences with students, while also developing strategies for providing students verbal and written feedback.
<b>Supporting Teachers and Students in the Remote Setting</b> <i>Professional Development for Administrators</i>	Recognize and navigate the design and delivery differences between in-person and remote instructional models. Administrators explore the key principles for effective remote learning, culminating with guidelines to support teachers as they make the necessary pedagogical shifts for distance learning.
<b>Virtual Coaching Cycle</b>	Collaborate with Savvas coaches to support educators with research-based practices to develop lessons for remote instruction. Engage in opportunities to co-deliver learning experiences for students, practice observation of virtual discussions and conferences with students, and provide objective, descriptive feedback that informs next steps.

Note: Evidence shows that these instructional practices take time to adopt into practice. Therefore, providing teachers with follow-up days of virtual coaching is strongly recommended.
