	<b>Operations and Algebraic Thinking 5.OA</b>	
	<b>Write and interpret numerical expressions.</b>	
<b>MCC5.OA.1</b>	Use parentheses, brackets, or braces in numerical expressions, and evaluate expressions with these symbols.	<b>SE/TE:</b> Topic 3: 72-73; Topic 8: 196-198, 200-201, 202-203  <b>TE:</b> Topic 3: 72A-72B, 73A-73B; Topic 8: 196A-196B, 199A-199B, 200A-200B, 201A-201B, 202A-202B, 203A-203B
<b>MCC5.OA.2</b>	Write simple expressions that record calculations with numbers, and interpret numerical expressions without evaluating them. For example, express the calculation “add 8 and 7, then multiply by 2” as $2 \times (8 + 7)$ . Recognize that $3 \times (18932 + 921)$ is three times as large as $18932 + 921$ , without having to calculate the indicated sum or product.	<b>SE/TE:</b> Topic 2: 44-45; Topic 3: 82-83; Topic 4: 110-111; Topic 8: 194-195, 210-211, 212-213  <b>TE:</b> Topic 2: 44A-44B, 45A-45B; Topic 3: 82A-82B, 83A-83B; Topic 4: 110A-110B, 111A-111B; Topic 8: 194A-194B, 195A-195B, 210A-210B, 211A-211B, 212A-212B, 213A-213B
	<b>Analyze patterns and relationships.</b>	
<b>MCC5.OA.3</b>	Generate two numerical patterns using two given rules. Identify apparent relationships between corresponding terms. Form ordered pairs consisting of corresponding terms from the two patterns, and graph the ordered pairs on a coordinate plane. <i>For example, given the rule “Add 3” and the starting number 0, and given the rule “Add 6” and the starting number 0, generate terms in the resulting sequences, and observe that the terms in one sequence are twice the corresponding terms in the other sequence. Explain informally why this is so.</i>	<b>SE/TE:</b> Topic 8: 204-205, 206-207, 208-209; Topic 16: 400-401, 402-403  <b>TE:</b> Topic 8: 204A-204B, 205A-205B, 206A-206B, 207A-207B, 208A-208B, 209A-209B; Topic 16: 400A-400B, 401A-401B, 402A-402B, 403A-403B

	<b>Graph points on the coordinate plane to solve real-world and mathematical problems.</b>	
<b>MCC5.G.1</b>	Use a pair of perpendicular number lines, called axes, to define a coordinate system, with the intersection of the lines (the origin) arranged to coincide with the 0 on each line and a given point in the plane located by using an ordered pair of numbers, called its coordinates. Understand that the first number indicates how far to travel from the origin in the direction of one axis, and the second number indicates how far to travel in the direction of the second axis, with the convention that the names of the two axes and the coordinates correspond (e.g., <i>x</i> -axis and <i>x</i> -coordinate, <i>y</i> -axis and <i>y</i> -coordinate).	<b>SE/TE:</b> Topic 16: 392-395, 396-397, 398-399, 400-401, 402-403, 404-405 <b>TE:</b> Topic 16: 392A-392B, 395A-395B, 396A-396B, 397A-397B, 398A-398B, 399A-399B, 400A-400B, 401A-401B, 402A-402B, 403A-403B, 404A-404B, 405A-405B
