<p><b>Number and Quantity</b></p>	
<p><b>The Real Number System N –RN</b></p>	
<p><b>Extend the properties of exponents to rational exponents.</b></p>	
<p>1. Explain how the definition of the meaning of rational exponents follows from extending the properties of integer exponents to those values, allowing for a notation for radicals in terms of rational exponents. For example, we define <math>5^{1/3}</math> to be the cube root of 5 because we want <math>(5^{1/3})^3 = 5^{(1/3)3}</math> to hold, so <math>(5^{1/3})^3</math> must equal 5.</p>	<p><b>SE/TE: 8.2:</b> Rational Exponents, <b>10.3:</b> Exponential Functions</p>
<p>2. Rewrite expressions involving radicals and rational exponents using the properties of exponents.</p>	<p><b>SE/TE: 8.2:</b> Rational Exponents, <b>8.3:</b> Simplifying Radical Expressions, <b>8.4:</b> Adding, Subtracting, and Multiplying Radical Expressions, <b>8.5:</b> Rationalizing Denominators and Numerators of Radical Expressions, <b>8.6:</b> Radical Equations and Problem Solving</p>
<p><b>Quantities★ N -Q</b></p>	
<p><b>Reason quantitatively and use units to solve problems.</b></p>	
<p>2. Define appropriate quantities for the purpose of descriptive modeling.</p>	<p><b>SE/TE: 1.1:</b> Tips for Success in Mathematics, <b>1.2:</b> Algebraic Expressions and Sets of Numbers, <b>2.1:</b> Linear Equations in One Variable, <b>2.2:</b> An Introduction to Problem Solving, <b>2.3:</b> Formulas and Problem Solving, <b>3.1:</b> Graphing Equations, <b>3.2:</b> Introduction to Functions, <b>3.3:</b> Graphing Linear Functions, <b>4.3:</b> Systems of Linear Equations and Problem Solving, <b>4.5:</b> Linear Programming, <b>6.8:</b> Solving Equations by Factoring and Problem Solving, <b>7.5:</b> Solving Equations Containing Rational Expressions, <b>7.6:</b> Rational Equations and Problem Solving, <b>7.7:</b> Variation and Problem Solving, <b>8.6:</b> Radical Equations and Problem Solving, <b>8.8:</b> Standard Deviation, <b>10.7:</b> Exponential and Logarithmic Equations and Applications, <b>11.1:</b> Quadratic Functions and Their Graphs, <b>11.2:</b> Further Graphing of Quadratic Functions, <b>11.5:</b> The Parabola and the Circle, <b>11.6:</b> The Ellipse and the Hyperbola, <b>13.4:</b> Fundamentals of Probability, <b>13.5:</b> Probability with the Fundamental Counting Principle, Permutations, and Combinations, <b>13.6:</b> Events Involving <i>Not</i> and <i>Or</i>; Odds, <b>13.7:</b> Events Involving <i>And</i>; Conditional Probability, <b>13.8:</b> The Normal Distribution, <b>14.2:</b> Right Angle Trigonometry, <b>14.8:</b> Applications of Trigonometric Functions, <b>15.5:</b> The Law of Sines, <b>15.6:</b> The Law of Cosines</p>

<b>The Complex Number System N -CN</b>	
<b>Perform arithmetic operations with complex numbers.</b>	
1. Know there is a complex number $i$ such that $i^2 = -1$ , and every complex number has the form $a + bi$ with $a$ and $b$ real.	<b>SE/TE: 8.7:</b> Complex Numbers, <b>9.5:</b> The Fundamental Theorem of Algebra
2. Use the relation $i^2 = -1$ and the commutative, associative, and distributive properties to add, subtract, and multiply complex numbers.	<b>SE/TE: 8.7:</b> Complex Numbers, <b>9.2:</b> Solving Quadratic Equations by the Quadratic Formula, <b>9.3:</b> Solving Equations by Using Quadratic Methods, <b>9.5:</b> The Fundamental Theorem of Algebra
<b>Use complex numbers in polynomial identities and equations.</b>	
7. Solve quadratic equations with real coefficients that have complex solutions.	<b>SE/TE: 9.2:</b> Solving Quadratic Equations by the Quadratic Formula, <b>9.3:</b> Solving Equations by Using Quadratic Methods, <b>9.5:</b> The Fundamental Theorem of Algebra
<b>Algebra</b>	
<b>Seeing Structure in Expressions A-SSE</b>	
<b>Interpret the structure of expressions</b>	
2. Use the structure of an expression to identify ways to rewrite it. For example, see $x^4 - y^4$ as $(x^2)^2 - (y^2)^2$ , thus recognizing it as a difference of squares that can be factored as $(x^2 - y^2)(x^2 + y^2)$ .	<b>SE/TE: 6.4:</b> Multiplying Polynomials, <b>6.5:</b> The Greatest Common Factor and Factoring by Grouping, <b>6.6:</b> Factoring Trinomials, <b>6.7:</b> Factoring by Special Products, <b>6.8:</b> Solving Equations by Factoring and Problem Solving, <b>7.3:</b> Simplifying Complex Fractions, <b>8.2:</b> Rational Exponents, <b>8.3:</b> Simplifying Radical Expressions
<b>Write expressions in equivalent forms to solve problems</b>	
3. Choose and produce an equivalent form of an expression to reveal and explain properties of the quantity represented by the expression.★	<b>SE/TE: 6.4:</b> Multiplying Polynomials, <b>6.5:</b> The Greatest Common Factor and Factoring by Grouping, <b>6.6:</b> Factoring Trinomials, <b>6.7:</b> Factoring by Special Products, <b>6.8:</b> Solving Equations by Factoring and Problem Solving, <b>7.3:</b> Simplifying Complex Fractions, <b>8.3:</b> Simplifying Radical Expressions, <b>12.1:</b> Sequences, <b>12.2:</b> Arithmetic and Geometric Sequences
c. Use the properties of exponents to transform expressions for exponential functions. For example the expression $1.15^t$ can be rewritten as $(1.15^{1/12})^{12t} \approx 1.012^{12t}$ to reveal the approximate equivalent monthly interest rate if the annual rate is 15%.	<b>SE/TE: 10.3:</b> Exponential Functions, <b>10.7:</b> Exponential and Logarithmic Equations and Applications

<b>Solve equations and inequalities in one variable</b>	
4. Solve quadratic equations in one variable.	<b>SE/TE: 9.1:</b> Solving Quadratic Equations by Completing the Square, <b>9.2:</b> Solving Quadratic Equations by the Quadratic Formula, <b>9.3:</b> Solving Equations by Using Quadratic Methods
b. Solve quadratic equations by inspection (e.g., for $x^2 = 49$ ), taking square roots, completing the square, the quadratic formula and factoring, as appropriate to the initial form of the equation. Recognize when the quadratic formula gives complex solutions and write them as $a \pm bi$ for real numbers $a$ and $b$ .	<b>SE/TE: 9.1:</b> Solving Quadratic Equations by Completing the Square, <b>9.2:</b> Solving Quadratic Equations by the Quadratic Formula, <b>9.3:</b> Solving Equations by Using Quadratic Methods
<b>Solve systems of equations</b>	
6. Solve systems of linear equations exactly and approximately (e.g., with graphs), focusing on pairs of linear equations in two variables.	<b>SE/TE: 4.1:</b> Solving Systems of Linear Equations in Two Variables, <b>4.2:</b> Solving Systems of Linear Equations in Three Variables, <b>4.3:</b> Systems of Linear Equations and Problem Solving
7. Solve a simple system consisting of a linear equation and a quadratic equation in two variables algebraically and graphically. For example, find the points of intersection between the line $y = -3x$ and the circle $x^2 + y^2 = 3$ .	<b>SE/TE: 11.7:</b> Solving Nonlinear Systems of Equations, <b>11.8:</b> Nonlinear Inequalities and Systems of Inequalities
<b>Represent and solve equations and inequalities graphically</b>	
11. Explain why the x-coordinates of the points where the graphs of the equations $y = f(x)$ and $y = g(x)$ intersect are the solutions of the equation $f(x) = g(x)$ ; find the solutions approximately, e.g., using technology to graph the functions, make tables of values, or find successive approximations. Include cases where $f(x)$ and/or $g(x)$ are linear, polynomial, rational, absolute value, exponential, and logarithmic functions.★	<b>SE/TE: 4.1:</b> Solving Systems of Linear Equations in Two Variables, <b>4.2:</b> Solving Systems of Linear Equations in Three Variables, <b>4.3:</b> Systems of Linear Equations and Problem Solving, <b>11.7:</b> Solving Nonlinear Systems of Equations, <b>11.8:</b> Nonlinear Inequalities and Systems of Inequalities
<b>Functions</b>	
<b>Interpreting Functions F-IF</b>	
<b>Understand the concept of a function and use function notation</b>	
3. Recognize that sequences are functions, sometimes defined recursively, whose domain is a subset of the integers. For example, the Fibonacci sequence is defined recursively by $f(0) = f(1) = 1$ , $f(n+1) = f(n) + f(n-1)$ for $n \geq 1$ .	<b>SE/TE: 12.1:</b> Sequences, <b>12.2:</b> Arithmetic and Geometric Sequences, <b>12.3:</b> Series, <b>12.4:</b> Partial Sums of Arithmetic and Geometric Sequences

<b>Trigonometric Functions F-TF</b>	
<b>Extend the domain of trigonometric functions using the unit circle</b>	
1. Understand radian measure of an angle as the length of the arc on the unit circle subtended by the angle.	<b>SE/TE: 14.1:</b> Angles and Radian Measure, <b>14.4:</b> Trigonometric Functions of Real Numbers; Periodic Functions
2. Explain how the unit circle in the coordinate plane enables the extension of trigonometric functions to all real numbers, interpreted as radian measures of angles traversed counterclockwise around the unit circle.	<b>SE/TE: 14.4:</b> Trigonometric Functions of Real Numbers; Periodic Functions
<b>Model periodic phenomena with trigonometric functions</b>	
5. Choose trigonometric functions to model periodic phenomena with specified amplitude, frequency, and midline. ★	<b>SE/TE: 14.5:</b> Graphs of Sine and Cosine Functions, <b>14.6:</b> Graph of the Tangent Function, <b>14.8:</b> Applications of Trigonometric Functions
<b>Prove and apply trigonometric identities</b>	
8. Prove the Pythagorean identity $\sin^2(\theta) + \cos^2(\theta) = 1$ and use it to find $\sin(\theta)$ , $\cos(\theta)$ , or $\tan(\theta)$ given $\sin(\theta)$ , $\cos(\theta)$ , or $\tan(\theta)$ and the quadrant of the angle.	<b>SE/TE: 14.2:</b> Right Angle Trigonometry, <b>15.1:</b> Verifying Trigonometric Identities
<b>Geometry</b>	
<b>Expressing Geometric Properties with Equations G-GPE</b>	
<b>Translate between the geometric description and the equation for a conic section</b>	
2. Derive the equation of a parabola given a focus and directrix.	<b>SE/TE: 11.5:</b> The Parabola and the Circle
<b>Statistics and Probability</b>	
<b>Interpreting Categorical and Quantitative Data S-ID</b>	
<b>Summarize, represent, and interpret data on a single count or measurement variable</b>	
4. Use the mean and standard deviation of a data set to fit it to a normal distribution and to estimate population percentages. Recognize that there are data sets for which such a procedure is not appropriate. Use calculators, spreadsheets, and tables to estimate areas under the normal curve.	<b>SE/TE: 8.8:</b> Standard Deviation, <b>13.8:</b> The Normal Distribution
<b>Recognize possible associations and trends in the data.</b>	
6. Represent data on two quantitative variables on a scatter plot, and describe how the variables are related.	<b>SE/TE: 3.2:</b> Introduction to Functions, <b>14.6:</b> Graph of the Tangent Function

<b>TNCore Common Core State Standards for Mathematics - High School PARRC Model Content Frameworks Mathematics Algebra II</b>	<b>MyMathLab® for School, Algebra II ©2016</b>
a. Fit a function to the data; use functions fitted to data to solve problems in the context of the data. Use given functions or choose a function suggested by the context. Emphasize linear, quadratic, and exponential models.	<b>SE/TE: 3.2:</b> Introduction to Functions
<b>Making Inferences and Justifying Conclusions S-IC</b>	
<b>Understand and evaluate random processes underlying statistical experiments</b>	
1. Understand statistics as a process for making inferences about population parameters based on a random sample from that population.	<b>SE/TE: 8.8:</b> Standard Deviation, <b>13.8:</b> The Normal Distribution, <b>Appendix B:</b> Surveys and Margins of Error
2. Decide if a specified model is consistent with results from a given data-generating process, e.g., using simulation. For example, a model says a spinning coin falls heads up with probability 0.5. Would a result of 5 tails in a row cause you to question the model?	<b>SE/TE: 8.8:</b> Standard Deviation, <b>13.8:</b> The Normal Distribution
<b>Make inferences and justify conclusions from sample surveys, experiments, and observational studies</b>	
3. Recognize the purposes of and differences among sample surveys, experiments, and observational studies; explain how randomization relates to each.	<b>SE/TE: Appendix B:</b> Surveys and Margins of Error
4. Use data from a sample survey to estimate a population mean or proportion; develop a margin of error through the use of simulation models for random sampling.	<b>SE/TE: Appendix B:</b> Surveys and Margins of Error
5. Use data from a randomized experiment to compare two treatments; use simulations to decide if differences between parameters are significant.	<b>SE/TE: Appendix B:</b> Surveys and Margins of Error
6. Evaluate reports based on data.	<b>SE/TE: Appendix B:</b> Surveys and Margins of Error
<b>Conditional Probability and the Rules of Probability S-CP</b>	
<b>Understand independence and conditional probability and use them to interpret data</b>	
1. Describe events as subsets of a sample space (the set of outcomes) using characteristics (or categories) of the outcomes, or as unions, intersections, or complements of other events ("or," "and," "not").	<b>SE/TE: 13.4:</b> Fundamentals of Probability, <b>13.5:</b> Probability with the Fundamental Counting Principle, Permutations, and Combinations, <b>13.6:</b> Events Involving <i>Not</i> and <i>Or</i> ; Odds, <b>13.7:</b> Events Involving <i>And</i> ; Conditional Probability

<b>TNCore Common Core State Standards for Mathematics - High School PARCC Model Content Frameworks Mathematics Algebra II</b>	<b>MyMathLab® for School, Algebra II © 2016</b>
2. Understand that two events $A$ and $B$ are independent if the probability of $A$ and $B$ occurring together is the product of their probabilities, and use this characterization to determine if they are independent.	<b>SE/TE: 13.6:</b> Events Involving <i>Not</i> and <i>Or</i> ; Odds, <b>13.7:</b> Events Involving <i>And</i> ; Conditional Probability
3. Understand the conditional probability of $A$ given $B$ as $P(A \text{ and } B)/P(B)$ , and interpret independence of $A$ and $B$ as saying that the conditional probability of $A$ given $B$ is the same as the probability of $A$ , and the conditional probability of $B$ given $A$ is the same as the probability of $B$ .	<b>SE/TE: 13.7:</b> Events Involving <i>And</i> ; Conditional Probability
4. Construct and interpret two-way frequency tables of data when two categories are associated with each object being classified. Use the two-way table as a sample space to decide if events are independent and to approximate conditional probabilities. For example, collect data from a random sample of students in your school on their favorite subject among math, science, and English. Estimate the probability that a randomly selected student from your school will favor science given that the student is in tenth grade. Do the same for other subjects and compare the results.	<b>SE/TE: 13.4:</b> Fundamentals of Probability
5. Recognize and explain the concepts of conditional probability and independence in everyday language and everyday situations.	<b>SE/TE: 13.7:</b> Events Involving <i>And</i> ; Conditional Probability
<b>Use the rules of probability to compute probabilities of compound events in a uniform probability model</b>	
6. Find the conditional probability of $A$ given $B$ as the fraction of $B$ 's outcomes that also belong to $A$ , and interpret the answer in terms of the model.	<b>SE/TE: 13.7:</b> Events Involving <i>And</i> ; Conditional Probability
7. Apply the Addition Rule, $P(A \text{ or } B) = P(A) + P(B) - P(A \text{ and } B)$ , and interpret the answer in terms of the model.	<b>SE/TE: 13.6:</b> Events Involving <i>Not</i> and <i>Or</i> ; Odds, <b>13.7:</b> Events Involving <i>And</i> ; Conditional Probability
