**Introduction**

The following document demonstrates the close alignment of ***Interactive Science, ©2016, Grade 1*** to the Arkansas Grade 1 Science Standards Learning Progressions by Topic. Correlation references are to the Student Edition and Teacher’s Edition.

***Interactive Science*** is an elementary science program that makes learning personal, engaging, and relevant for today’s student. The program features an innovative Write-in Student Edition that enables students to become active participants in their learning and truly connect the Big Ideas of science to their world.

The 2016 edition of ***Interactive Science*** supports the Next Generation Science Standards (NGSS) in several ways. In the Student Edition, lessons provide interactive opportunities for students to acquire the Disciplinary Core Ideas that are the building blocks of the NGSS Performance Expectations at each grade level. STEM Activities, Apply It! activities, Design It! Activities, and Performance-Based Assessments enable students to research, investigate, and apply Science and Engineering Practices to real-world problems in a meaningful way. Science and Engineering Practices are further emphasized at each grade level in the Skills Handbook portion of the Student Edition. In the Teacher’s Edition, the NGSS Cross-Cutting Concepts that link across grade levels and across disciplines within grade levels are noted at the chapter level, and a detailed and focused Performance Expectation Activity is provided for each NGSS standard.

<b>Waves: Light and Sound</b>	
Students who demonstrate understanding can:	
<p><b>1-PS4-1 Plan and conduct investigations to provide evidence that vibrating materials can make sound and that sound can make materials vibrate.</b>            [Clarification Statement: Examples of vibrating materials that make sound could include striking a tuning fork and plucking a stretched string. Examples of how sound can make matter vibrate could include holding a piece of paper near a speaker making sound and holding an object near a vibrating tuning fork.]</p> <p><b>1-PS4-2 Make observations to construct an evidence-based account that objects can be seen only when illuminated.</b> [Clarification Statement: Examples of observations could include those made in a completely dark room, a pinhole box, and a video of a cave explorer with a flashlight. Illumination could be from an external light source or by an object giving off its own light.]</p> <p><b>1-PS4-3 Plan and conduct an investigation to determine the effect of placing objects made with different materials in the path of a beam of light.</b> [Clarification Statement: Examples of materials could include those that are transparent (such as clear plastic), translucent (such as wax paper), opaque (such as cardboard), or reflective (such as a mirror).] [Assessment Boundary: Assessment does not include the speed of light.]</p> <p><b>1-PS4-4 Use tools and materials to design and build a device that uses light or sound to solve the problem of communicating over a distance.*</b> [Clarification Statement: Examples of devices could include a light source to send signals, paper cup and string “telephones”, and a pattern of drum beats.] [Assessment Boundary: Assessment does not include technological details for how communication devices work.]</p>

Students who demonstrate understanding can:	
<b>1-ETS1-1 Ask questions, make observations, and gather information about a situation people want to change to define a simple problem that can be solved through the development of a new or improved object or tool.</b>	
<b>1-ETS1-2 Develop a simple sketch, drawing, or physical model to illustrate how the shape of an object helps it function as needed to solve a given problem.</b>	
<b>1-ETS1-3 Analyze data from tests of two objects designed to solve the same problem to compare the strengths and weaknesses of how each performs.</b>	
The performance expectations above were developed using the following elements from the NRC document <i>A Framework for K-12 Science Education</i> :	
<b>Disciplinary Core Ideas</b>
