

Publisher:	Pearson
Program Title:	Conceptual Physics © 2009, (Hewitt)
Components:	SE – Student Edition; TE – Teacher’s Edition
Grade Level(s):	9-12
Intended Audience:	High School

**Standards Map - Basic Comprehensive Program
Grades Nine Through Twelve - Science**

Pursuant to the State Board approved, *Science Content Standards for California Public Schools, Kindergarten Through Grade Twelve*: Standards that all students are expected to achieve in the course of their studies are unmarked. Standards that all students should have the opportunity to learn are marked with an asterisk (*).

Grade	Standard #	Text of Standard	PUBLISHER CITATIONS**		FOR LEA USE ONLY		
			Primary Sources	Secondary Sources	Meets Standard		Local Education Agency Evaluation Notes
DISCIPLINE		PHYSICS			Y	N	
		Motion and Forces Newton’s laws predict the motion of most objects. As a basis for understanding this concept:					
9-12	1a	Students know how to solve problems that involve constant speed and average speed.	SE/TE: 48-50, 56, 61-67				

Grade	Standard #	Text of Standard	PUBLISHER CITATIONS**		FOR LEA USE ONLY		
			Primary Sources	Secondary Sources	Meets Standard		Local Education Agency Evaluation Notes
					Y	N	
9-12	1b	Students know that when forces are balanced, no acceleration occurs; thus an object continues to move at a constant speed or stays at rest (Newton's first law).	SE/TE: 33-34, 38-39				
9-12	1c	Students know how to apply the law $F = ma$ to solve one-dimensional motion problems that involve constant forces (Newton's second law).	SE/TE: 88-97, 98-103				
9-12	1d	Students know that when one object exerts a force on a second object, the second object always exerts a force of equal magnitude and in the opposite direction (Newton's third law).	SE/TE: 107-116				
9-12	1e	Students know the relationship between the universal law of gravitation and the effect of gravity on an object at the surface of Earth.	SE/TE: 237-241				
9-12	1f	Students know applying a force to an object perpendicular to the direction of its motion causes the object to change direction but not speed (e.g., Earth's gravitational force causes a satellite in a circular orbit to change direction but not speed).	SE/TE: 265-268				
9-12	1g	Students know circular motion requires the application of a constant force directed toward the center of the circle.	SE/TE: 175-180, 265-268				

Grade	Standard #	Text of Standard	PUBLISHER CITATIONS**		FOR LEA USE ONLY		
			Primary Sources	Secondary Sources	Meets Standard		Local Education Agency Evaluation Notes
					Y	N	
9-12	1h*	Students know Newton's laws are not exact but provide very good approximations unless an object is moving close to the speed of light or is small enough that quantum effects are important.	SE/TE: 776-777				
9-12	1i*	Students know how to solve two-dimensional trajectory problems.	SE/TE: 69-79, 80-85				
9-12	1j*	Students know how to resolve two-dimensional vectors into their components and calculate the magnitude and direction of a vector from its components.	SE/TE: 69-79, 80-85				
9-12	1k*	Students know how to solve two-dimensional problems involving balanced forces (statics).	SE/TE: 12-22, 24-27, 33-39, 42-45				
9-12	1l*	Students know how to solve problems in circular motion by using the formula for centripetal acceleration in the following form: $a = v^2 / r$.	SE/TE: 170-179, 182-187				
9-12	1m*	Students know how to solve problems involving the forces between two electric charges at a distance (Coulomb's law) or the forces between two masses at a distance (universal gravitation).	SE/TE: 237-239, 256-261, 648-650				

			PUBLISHER CITATIONS**		FOR LEA USE ONLY		
Grade	Standard #	Text of Standard	Primary Sources	Secondary Sources	Meets Standard		Local Education Agency Evaluation Notes
					Y	N	
		Conservation of Energy and Momentum The laws of conservation of energy and momentum provide a way to predict and describe the movement of objects. As a basis for understanding this concept:					
9-12	2a	Students know how to calculate kinetic energy by using the formula $E = (1/2)mv^2$.	SE/TE: 150, 165, 167, 169				
9-12	2b	Students know how to calculate changes in gravitational potential energy near Earth by using the formula (change in potential energy) = mgh (h is the change in the elevation).	SE/TE: 149, 165, 167-169				
9-12	2c	Students know how to solve problems involving conservation of energy in simple systems, such as falling objects.	SE/TE: 153-154, 166-169				
9-12	2d	Students know how to calculate momentum as the product mv .	SE/TE: 125, 138, 140-143				
9-12	2e	Students know momentum is a separately conserved quantity different from energy.	SE/TE: 130-131, 138, 140-143				
9-12	2f	Students know an unbalanced force on an object produces a change in its momentum.	SE/TE: 125-129				

			PUBLISHER CITATIONS**		FOR LEA USE ONLY		
Grade	Standard #	Text of Standard	Primary Sources	Secondary Sources	Meets Standard		Local Education Agency Evaluation Notes
					Y	N	
9-12	2g	Students know how to solve problems involving elastic and inelastic collisions in one dimension by using the principles of conservation of momentum and energy.	SE/TE: 132-136, 139-143				
9-12	2h*	Students know how to solve problems involving conservation of energy in simple systems with various sources of potential energy, such as capacitors and springs.	<i>The opportunity to address this standard is found on the following pages:</i> SE/TE: 153-154, 672-673				
		Heat and Thermodynamics Energy cannot be created or destroyed, although in many processes energy is transferred to the environment as heat. As a basis for understanding this concept:					
9-12	3a	Students know heat flow and work are two forms of energy transfer between systems.	SE/TE: 470-471				

Grade	Standard #	Text of Standard	PUBLISHER CITATIONS**		FOR LEA USE ONLY		
			Primary Sources	Secondary Sources	Meets Standard		Local Education Agency Evaluation Notes
					Y	N	
9-12	3b	Students know that the work done by a heat engine that is working in a cycle is the difference between the heat flow into the engine at high temperature and the heat flow out at a lower temperature (first law of thermodynamics) and that this is an example of the law of conservation of energy.	<i>The opportunity to address this standard is found on the following pages:</i> SE/TE: 470-471				
9-12	3c	Students know the internal energy of an object includes the energy of random motion of the object's atoms and molecules, often referred to as thermal energy. The greater the temperature of the object, the greater the energy of motion of the atoms and molecules that make up the object.	SE/TE: 406, 408-412				
9-12	3d	Students know that most processes tend to decrease the order of a system over time and that energy levels are eventually distributed uniformly.	SE/TE: 72-773, 776-777				
9-12	3e	Students know that entropy is a quantity that measures the order or disorder of a system and that this quantity is larger for a more disordered system.	SE/TE: 479-481				
9-12	3f*	Students know the statement "Entropy tends to increase" is a law of statistical probability that governs all closed systems (second law of thermodynamics).	SE/TE: 479-481				

			PUBLISHER CITATIONS**		FOR LEA USE ONLY		
Grade	Standard #	Text of Standard	Primary Sources	Secondary Sources	Meets Standard		Local Education Agency Evaluation Notes
					Y	N	
9-12	3g*	Students know how to solve problems involving heat flow, work, and efficiency in a heat engine and know that all real engines lose some heat to their surroundings.	SE/TE: 470-481, 484-487				
		Waves Waves have characteristic properties that do not depend on the type of wave. As a basis for understanding this concept:					
9-12	4a	Students know waves carry energy from one place to another.	SE/TE: 490-506				
9-12	4b	Students know how to identify transverse and longitudinal waves in mechanical media, such as springs and ropes, and on the earth (seismic waves).	SE/TE: 497-498				
9-12	4c	Students know how to solve problems involving wavelength, frequency, and wave speed.	SE/TE: 490-496, 508-513				
9-12	4d	Students know sound is a longitudinal wave whose speed depends on the properties of the medium in which it propagates.	SE/TE: 495-497, 514-518				
9-12	4e	Students know radio waves, light, and X-rays are different wavelength bands in the spectrum of electromagnetic waves whose speed in a vacuum is approximately 3×10^8 m/s (186,000 miles/second).	SE/TE: 436, 536, 753-755				

Grade	Standard #	Text of Standard	PUBLISHER CITATIONS**		FOR LEA USE ONLY		
			Primary Sources	Secondary Sources	Meets Standard		Local Education Agency Evaluation Notes
					Y	N	
9-12	4f	Students know how to identify the characteristic properties of waves: interference (beats), diffraction, refraction, Doppler effect, and polarization.	SE/TE: 498-503, 533, 542-546, 584-590, 625-632				
		Electric and Magnetic Phenomena Electric and magnetic phenomena are related and have many practical applications. As a basis for understanding this concept:					
9-12	5a	Students know how to predict the voltage or current in simple direct current (DC) electric circuits constructed from batteries, wires, resistors, and capacitors.	SE/TE: 670-674, 682-685, 702-712				
9-12	5b	Students know how to solve problems involving Ohm's law.	SE/TE: 685-686, 696, 700				
9-12	5c	Students know any resistive element in a DC circuit dissipates energy, which heats the resistor. Students can calculate the power (rate of energy dissipation) in any resistive circuit element by using the formula Power = IR (potential difference) $\times I$ (current) = I^2R .	<i>The opportunity to address this standard is found on the following pages:</i> SE/TE: 685, 710-711				

Grade	Standard #	Text of Standard	PUBLISHER CITATIONS**		FOR LEA USE ONLY		
			Primary Sources	Secondary Sources	Meets Standard		Local Education Agency Evaluation Notes
					Y	N	
9-12	5d	Students know the properties of transistors and the role of transistors in electric circuits.	<i>The opportunity to address this standard is found on the following pages:</i> SE/TE: 652				
9-12	5e	Students know charged particles are sources of electric fields and are subject to the forces of the electric fields from other charges.	SE/TE: 665-669				
9-12	5f	Students know magnetic materials and electric currents (moving electric charges) are sources of magnetic fields and are subject to forces arising from the magnetic fields of other sources.	SE/TE: 722-724, 726-727, 728-729				
9-12	5h	Students know how to determine the direction of a magnetic field produced by a current flowing in a straight wire or in a coil.	SE/TE: 242-243				
9-12	5h	Students know changing magnetic fields produce electric fields, thereby inducing currents in nearby conductors.	SE/TE: 726-727, 728-729, 740-742, 751				
9-12	5i	Students know plasmas, the fourth state of matter, contain ions or free electrons or both and conduct electricity.	SE/TE: 337				
9-12	5j*	Students know electric and magnetic fields contain energy and act as vector force fields.	SE/TE: 665-674, 722-731				

Grade	Standard #	Text of Standard	PUBLISHER CITATIONS**		FOR LEA USE ONLY		
			Primary Sources	Secondary Sources	Meets Standard		Local Education Agency Evaluation Notes
					Y	N	
9-12	5k*	Students know the force on a charged particle in an electric field is qE , where E is the electric field at the position of the particle and q is the charge of the particle.	SE/TE: 665-674				
9-12	5l*	Students know how to calculate the electric field resulting from a point charge.	SE/TE: 665-674				
9-12	5m*	Students know static electric fields have as their source some arrangement of electric charges.	<i>The opportunity to address this standard is found on the following pages: SE/TE: 648, 665-674</i>				
9-12	5n*	Students know the magnitude of the force on a moving particle (with charge q) in a magnetic field is $qvB \sin(a)$, where a is the angle between v and B (v and B are the magnitudes of vectors v and B , respectively), and students use the right-hand rule to find the direction of this force.	<i>The opportunity to address this standard is found on the following pages: SE/TE: 722-731</i>				

			PUBLISHER CITATIONS**		FOR LEA USE ONLY		
Grade	Standard #	Text of Standard	Primary Sources	Secondary Sources	Meets Standard		Local Education Agency Evaluation Notes
					Y	N	
9-12	50*	Students know how to apply the concepts of electrical and gravitational potential energy to solve problems involving conservation of energy.	<i>The opportunity to address this standard is found on the following pages: SE/TE: 148-149, 153-154, 669-673</i>				
DISCIPLINE		CHEMISTRY					
		Atomic and Molecular Structure The periodic table displays the elements in increasing atomic number and shows how periodicity of the physical and chemical properties of the elements relates to atomic structure. As a basis for understanding this concept:					
9-12	1a	Students know how to relate the position of an element in the periodic table to its atomic number and atomic mass.	SE/TE: 335-336				
9-12	1b	Students know how to use the periodic table to identify metals, semi metals, non-metals, and halogens.	<i>The opportunity to address this standard is found on the following pages: SE/TE: 335-336</i>				

Grade	Standard #	Text of Standard	PUBLISHER CITATIONS**		FOR LEA USE ONLY		
			Primary Sources	Secondary Sources	Meets Standard		Local Education Agency Evaluation Notes
					Y	N	
9-12	1c	Students know how to use the periodic table to identify alkali metals, alkaline earth metals and transition metals, trends in ionization energy, electronegativity, and the relative sizes of ions and atoms.	<i>The opportunity to address this standard is found on the following pages: SE/TE: 335-336</i>				
9-12	1d	Students know how to use the periodic table to determine the number of electrons available for bonding.	<i>The opportunity to address this standard is found on the following pages: SE/TE: 334-336</i>				
9-12	1e	Students know the nucleus of the atom is much smaller than the atom yet contains most of its mass.	SE/TE: 331-333, 645				
9-12	1f*	Students know how to use the periodic table to identify the lanthanide, actinide, and transactinide elements and know that the transuranium elements were synthesized and identified in laboratory experiments through the use of nuclear accelerators.	<i>The opportunity to address this standard is found on the following pages: SE/TE: 325, 335-336</i>				

Grade	Standard #	Text of Standard	PUBLISHER CITATIONS**		FOR LEA USE ONLY		
			Primary Sources	Secondary Sources	Meets Standard		Local Education Agency Evaluation Notes
					Y	N	
9-12	1g*	Students know how to relate the position of an element in the periodic table to its quantum electron configuration and to its reactivity with other elements in the table.	<i>The opportunity to address this standard is found on the following pages: SE/TE: 335-336</i>				
9-12	1h*	Students know the experimental basis for Thomson's discovery of the electron, Rutherford's nuclear atom, Millikan's oil drop experiment, and Einstein's explanation of the photoelectric effect.	<i>The opportunity to address this standard is found on the following pages: SE/TE: 325-336, 645, 767-770</i>				
9-12	1i*	Students know the experimental basis for the development of the quantum theory of atomic structure and the historical importance of the Bohr model of the atom.	SE/TE: 645, 767, 775				
9-12	1j*	Students know that spectral lines are the result of transitions of electrons between energy levels and that these lines correspond to photons with a frequency related to the energy spacing between levels by using Planck's relationship ($E = h\nu$).	SE/TE: 768				

			PUBLISHER CITATIONS**		FOR LEA USE ONLY		
Grade	Standard #	Text of Standard	Primary Sources	Secondary Sources	Meets Standard		Local Education Agency Evaluation Notes
					Y	N	
		<p>Chemical Bonds Biological, chemical, and physical properties of matter result from the ability of atoms to form bonds from electrostatic forces between electrons and protons and between atoms and molecules. As a basis for understanding this concept:</p>					
9-12	2a	Students know atoms combine to form molecules by sharing electrons to form covalent or metallic bonds or by exchanging electrons to form ionic bonds.	SE/TE: 330-336				
9-12	2b	Students know chemical bonds between atoms in molecules such as H ₂ , CH ₄ , NH ₃ , H ₂ CCH ₂ , N ₂ , Cl ₂ , and many large biological molecules are covalent.	<i>The opportunity to address this standard is found on the following pages:</i> SE/TE: 330-336				
9-12	2c	Students know salt crystals, such as NaCl, are repeating patterns of positive and negative ions held together by electrostatic attraction.	<i>The opportunity to address this standard is found on the following pages:</i> SE/TE: 330-336, 645-650				

Grade	Standard #	Text of Standard	PUBLISHER CITATIONS**		FOR LEA USE ONLY		
			Primary Sources	Secondary Sources	Meets Standard		Local Education Agency Evaluation Notes
					Y	N	
9-12	2d	Students know the atoms and molecules in liquids move in a random pattern relative to one another because the intermolecular forces are too weak to hold the atoms or molecules in a solid form.	SE/TE: 337				
9-12	2e	Students know how to draw Lewis dot structures.	<i>The opportunity to address this standard is found on the following pages:</i> SE/TE: 334-335, 774				
9-12	2f*	Students know how to predict the shape of simple molecules and their polarity from Lewis dot structures.	<i>The opportunity to address this standard is found on the following pages:</i> SE/TE: 334-335, 774				
9-12	2g*	Students know how electronegativity and ionization energy relate to bond formation.	SE/TE: 775				

Grade	Standard #	Text of Standard	PUBLISHER CITATIONS**		FOR LEA USE ONLY		
			Primary Sources	Secondary Sources	Meets Standard		Local Education Agency Evaluation Notes
					Y	N	
9-12	2h*	Students know how to identify solids and liquids held together by Van der Waals forces or hydrogen bonding and relate these forces to volatility and boiling/melting point temperatures.					
		Conservation of Matter and Stoichiometry The conservation of atoms in chemical reactions leads to the principle of conservation of matter and the ability to calculate the mass of products and reactants. As a basis for understanding this concept:					
9-12	3a	Students know how to describe chemical reactions by writing balanced equations.					
9-12	3b	Students know the quantity one mole is set by defining one mole of carbon 12 atoms to have a mass of exactly 12 grams.					
9-12	3c	Students know one mole equals 6.02×10^{23} particles (atoms or molecules).					
9-12	3d	Students know how to determine the molar mass of a molecule from its chemical formula and a table of atomic masses and how to convert the mass of a molecular substance to moles, number of particles, or volume of gas at standard temperature and pressure.					

Grade	Standard #	Text of Standard	PUBLISHER CITATIONS**		FOR LEA USE ONLY		
			Primary Sources	Secondary Sources	Meets Standard		Local Education Agency Evaluation Notes
					Y	N	
9-12	3e	Students know how to calculate the masses of reactants and products in a chemical reaction from the mass of one of the reactants or products and the relevant atomic masses.					
9-12	3f*	Students know how to calculate percent yield in a chemical reaction.					
9-12	3g*	Students know how to identify reactions that involve oxidation and reduction and how to balance oxidation-reduction reactions.					
		Gases and their Properties The kinetic molecular theory describes the motion of atoms and molecules and explains the properties of gases. As a basis for understanding this concept:					
9-12	4a	Students know the random motion of molecules and their collisions with a surface create the observable pressure on that surface.	SE/TE: 382-395				
9-12	4b	Students know the random motion of molecules explains the diffusion of gases.	<i>The opportunity to address this standard is found on the following pages:</i> SE/TE: 382-395				

Grade	Standard #	Text of Standard	PUBLISHER CITATIONS**		FOR LEA USE ONLY		
			Primary Sources	Secondary Sources	Meets Standard		Local Education Agency Evaluation Notes
					Y	N	
9-12	4c	Students know how to apply the gas laws to relations between the pressure, temperature, and volume of any amount of an ideal gas or any mixture of ideal gases.	<i>The opportunity to address this standard is found on the following pages: SE/TE: 382-395</i>				
9-12	4d	Students know the values and meanings of standard temperature and pressure (STP).					
9-12	4e	Students know how to convert between the Celsius and Kelvin temperature scales.	SE/TE: 407				
9-12	4f	Students know there is no temperature lower than 0 Kelvin.	SE/TE: 407				
9-12	4g*	Students know the kinetic theory of gases relates the absolute temperature of a gas to the average kinetic energy of its molecules or atoms.	<i>The opportunity to address this standard is found on the following pages: SE/TE: 407</i>				
9-12	4h*	Students know how to solve problems by using the ideal gas law in the form $PV = nRT$.					
9-12	4i*	Students know how to apply Dalton's law of partial pressures to describe the composition of gases and Graham's law to predict diffusion of gases.					

			PUBLISHER CITATIONS**		FOR LEA USE ONLY		
Grade	Standard #	Text of Standard	Primary Sources	Secondary Sources	Meets Standard		Local Education Agency Evaluation Notes
					Y	N	
		Acids and Bases Acids, bases, and salts are three classes of compounds that form ions in water solutions. As a basis for understanding this concept:					
9-12	5a	Students know the observable properties of acids, bases, and salt solutions.					
9-12	5b	Students know acids are hydrogen-ion-donating and bases are hydrogen-ion-accepting substances.					
9-12	5c	Students know strong acids and bases fully dissociate and weak acids and bases partially dissociate.					
9-12	5d	Students know how to use the pH scale to characterize acid and base solutions.					
9-12	5e*	Students know the Arrhenius, Brønsted-Lowry, and Lewis acid–base definitions.					
9-12	5f*	Students know how to calculate pH from the hydrogen-ion concentration.					
9-12	5g*	Students know buffers stabilize pH in acid–base reactions.					
		Solutions Solutions are homogenous mixtures of two or more substances. As a basis for understanding this concept:					
9-12	6a	Students know the definitions of solute and solvent.					

Grade	Standard #	Text of Standard	PUBLISHER CITATIONS**		FOR LEA USE ONLY		
			Primary Sources	Secondary Sources	Meets Standard		Local Education Agency Evaluation Notes
					Y	N	
9-12	6b	Students know how to describe the dissolving process at the molecular level by using the concept of random molecular motion.					
9-12	6c	Students know temperature, pressure, and surface area affect the dissolving process.					
9-12	6d	Students know how to calculate the concentration of a solute in terms of grams per liter, molality, parts per million, and percent composition.					
9-12	6e*	Students know the relationship between the molality of a solute in a solution and the solution's depressed freezing point or elevated boiling point.					
9-12	6f*	Students know how molecules in a solution are separated or purified by the methods of chromatography and distillation.					
		Chemical Thermodynamics Energy is exchanged or transformed in all chemical reactions and physical changes of matter. As a basis for understanding this concept:					
9-12	7a	Students know how to describe temperature and heat flow in terms of the motion of molecules (or atoms).	SE/TE: 337, 451-456				
9-12	7b	Students know chemical processes can either release (exothermic) or absorb (endothermic) thermal energy.	SE/TE: 148, 154				

Grade	Standard #	Text of Standard	PUBLISHER CITATIONS**		FOR LEA USE ONLY		
			Primary Sources	Secondary Sources	Meets Standard		Local Education Agency Evaluation Notes
					Y	N	
9-12	7c	Students know energy is released when a material condenses or freezes and is absorbed when a material evaporates or melts.	SE/TE: 450-456, 458-461				
9-12	7d	Students know how to solve problems involving heat flow and temperature changes, using known values of specific heat and latent heat of phase change.	<i>The opportunity to address this standard is found on the following pages:</i> SE/TE: 411-415, 458-461				
9-12	7e*	Students know how to apply Hess's law to calculate enthalpy change in a reaction.					
9-12	7f*	Students know how to use the Gibbs free energy equation to determine whether a reaction would be spontaneous.					
		Reaction Rates Chemical reaction rates depend on factors that influence the frequency of collision of reactant molecules. As a basis for understanding this concept:					
9-12	8a	Students know the rate of reaction is the decrease in concentration of reactants or the increase in concentration of products with time.					

Grade	Standard #	Text of Standard	PUBLISHER CITATIONS**		FOR LEA USE ONLY		
			Primary Sources	Secondary Sources	Meets Standard		Local Education Agency Evaluation Notes
					Y	N	
9-12	8b	Students know how reaction rates depend on such factors as concentration, temperature, and pressure.					
9-12	8c	Students know the role a catalyst plays in increasing the reaction rate.					
9-12	8d*	Students know the definition and role of activation energy in a chemical reaction.					
		Chemical Equilibrium Chemical equilibrium is a dynamic process at the molecular level. As a basis for understanding this concept:					
9-12	9a	Students know how to use LeChatelier's principle to predict the effect of changes in concentration, temperature, and pressure.					
9-12	9b	Students know equilibrium is established when forward and reverse reaction rates are equal.					
9-12	9c*	Students know how to write and calculate an equilibrium constant expression for a reaction.					

Grade	Standard #	Text of Standard	PUBLISHER CITATIONS**		FOR LEA USE ONLY		
			Primary Sources	Secondary Sources	Meets Standard		Local Education Agency Evaluation Notes
					Y	N	
		Organic Chemistry and Biochemistry The bonding characteristics of carbon allow the formation of many different organic molecules of varied sizes, shapes, and chemical properties and provide the bio-chemical basis of life. As a basis for understanding this concept:					
9-12	10a	Students know large molecules (polymers), such as proteins, nucleic acids, and starch, are formed by repetitive combinations of simple subunits.					
9-12	10b	Students know the bonding characteristics of carbon that result in the formation of a large variety of structures ranging from simple hydrocarbons to complex polymers and biological molecules.					
9-12	10c	Students know amino acids are the building blocks of proteins.					
9-12	10d*	Students know the system for naming the ten simplest linear hydrocarbons and isomers that contain single bonds, simple hydrocarbons with double and triple bonds, and simple molecules that contain a benzene ring.					
9-12	10e*	Students know how to identify the functional groups that form the basis of alcohols, ketones, ethers, amines, esters, aldehydes, and organic acids.					

Grade	Standard #	Text of Standard	PUBLISHER CITATIONS**		FOR LEA USE ONLY		
			Primary Sources	Secondary Sources	Meets Standard		Local Education Agency Evaluation Notes
					Y	N	
9-12	10f*	Students know the R-group structure of amino acids and know how they combine to form the polypeptide backbone structure of proteins.					
		Nuclear Processes Nuclear processes are those in which an atomic nucleus changes, including radioactive decay of naturally occurring and human-made isotopes, nuclear fission, and nuclear fusion. As a basis for understanding this concept:					
9-12	11a	Students know protons and neutrons in the nucleus are held together by nuclear forces that overcome the electromagnetic repulsion between the protons.	SE/TE: 238, 333, 783-784				
9-12	11b	Students know the energy release per gram of material is much larger in nuclear fusion or fission reactions than in chemical reactions. The change in mass (calculated by $E = mc^2$) is small but significant in nuclear reactions.	SE/TE: 305-306, 800-812, 817-824				
9-12	11c	Students know some naturally occurring isotopes of elements are radioactive, as are isotopes formed in nuclear reactions.	SE/TE: 788-789, 792-795, 798-801, 812-816				
9-12	11d	Students know the three most common forms of radioactive decay (alpha, beta, and gamma) and know how the nucleus changes in each type of decay.	SE/TE: 785-787, 792-795, 798-799, 800-801				

Grade	Standard #	Text of Standard	PUBLISHER CITATIONS**		FOR LEA USE ONLY		
			Primary Sources	Secondary Sources	Meets Standard		Local Education Agency Evaluation Notes
					Y	N	
9-12	11e	Students know alpha, beta, and gamma radiation produce different amounts and kinds of damage in matter and have different penetrations.	SE/TE: 785-787, 792-795, 798-801				
9-12	11f*	Students know how to calculate the amount of a radioactive substance remaining after an integral number of half lives have passed.	SE/TE: 790-791, 796-798, 817				
9-12	11g*	Students know protons and neutrons have substructures and consist of particles called quarks.	<i>The opportunity to address this standard is found on the following pages:</i> SE/TE: 783-784				
DISCIPLINE		INVESTIGATION AND EXPERIMENTATION Scientific progress is made by asking meaningful questions and conducting careful investigations. As a basis for understanding this concept and addressing the content in the other four strands, students should develop their own questions and perform investigations. Students will:

					Y	N	
			700-701, 718-719, 763, 807, 829				
9-12	1f	Distinguish between hypothesis and theory as scientific terms.	SE/TE: 2-5				
9-12	1g	Recognize the usefulness and limitations of models and theories as scientific representations of reality.	SE/TE: 2-5, 767				
9-12	1h	Read and interpret topographic and geologic maps.					
9-12	1i	Analyze the locations, sequences, or time intervals that are characteristic of natural phenomena (e.g., relative ages of rocks, locations of planets over time, and succession of species in an ecosystem).	SE/TE: 33, 40, 236, 244, 246-254, 262-275				
9-12	1j	Recognize the issues of statistical variability and the need for controlled tests.	<i>The opportunity to address this standard is found on the following pages:</i> SE/TE: 1-7				

Grade	Standard #	Text of Standard	PUBLISHER CITATIONS**		FOR LEA USE ONLY		
			Primary Sources	Secondary Sources	Meets Standard		Local Education Agency Evaluation Notes
					Y	N	
9-12	1k	Recognize the cumulative nature of scientific evidence.	<i>The opportunity to address this standard is found on the following pages: SE/TE: 1-7, 29-34</i>				
9-12	1l	Analyze situations and solve problems that require combining and applying concepts from more than one area of science.	SE/TE: 37, 91, 96, 107, 154, 199, 223, 252, 292, 294, 316, 332, 371, 408, 476, 493, 518, 556, 611, 673, 709, 729, 745, 751, 793, 817				
9-12	1m	Investigate a science-based societal issue by researching the literature, analyzing data, and communicating the findings. Examples of issues include irradiation of food, cloning of animals by somatic cell nuclear transfer, choice of energy sources, and land and water use decisions in California.	SE/TE: 163, 204, 236, 248, 275, 481, 526, 648, 727, 756				

Grade	Standard #	Text of Standard	PUBLISHER CITATIONS**		FOR LEA USE ONLY
