A Correlation of enVision Mathematics Common Core ©2020 to the Louisiana Student Standards for Mathematics 2017

Introduction

The new enVision® Mathematics Common Core ©2020 is the latest offering of the nationally recognized Grades K-12 series, created for print, digital, and blended instruction. Problem-Based Learning connects with Visual Learning to deep conceptual understanding. Interactive multimedia experiences engage learners in student choice and solving rich problems. Extensive customization and differentiation options empower every teacher and student.

UNDERSTANDING

A simple lesson design provides a clear, intentional pathway. Starting on a firm foundation of conceptual understanding, students can connect and apply math ideas in amazing ways. High-interest math projects invite all students to be active participants.

A simple lesson design provides a clear, intentional pathway.

STEP 1 Problem-Based Learning

STEP 2 Visual Learning

STEP 3 Assess and Differentiate

ASSESSMENT

The enVision Assessment Suite offers options to move students toward mastery of state standards while driving instructional differentiation.

DIAGNOSTIC Assessment

Reading Test, Diagnostic Test (Math Diagnosis and Intervention System), Review What You Know

FORMATIVE Assessment

SCOUT Observational Assessment used during Solve & Share, Do You Understand? And Convince Me! Guide Practice, Quick Check

SUMMATIVE Assessment

Topic Assessments, Topic Performance Assessments, Examview Test Generator, Fluency Assessments, Cumulative/Benchmarks Assessments, Progress Monitoring Assessments

INSTRUCTIONAL SUPPORT

Gain a new perspective on your teaching with embedded strategies, methods, and a wide range of Professional Development opportunities in print and digital formats.

Ideas, Inspiration, and Teaching Methods

Math background for every Topic and Lesson serves as an easy-to-access math methods course.

Make every lesson perfect for you. Access all digital content, assessments, and management tools Realize.com.

Kids See the Math. Teachers See Results.

| <p>Math Practices</p> | |
| <p>1. Make sense of problems and persevere in solving them.</p> | <p>enVision Mathematics provides numerous instructional opportunities to help students develop proficiency in the math practices. To get students off to a good start on all eight practices, use the Math Practices and Problem Solving Handbook pages at Realize.com, along with the Math Practices Posters, and supporting Math Practices Animations. Each lesson begins with Problem- Based Learning, an activity in which students interact with their peers and teachers to make sense of and decide on a workable solution for a situation. Another feature of each lesson is the set of problem-solving exercises in which students persevere by applying different skills and strategies to solve problems. Each Problem-Solving Lesson provides instruction and practice focused on a specific math practice.</p> <p>Student’s Edition and Teacher’s Edition pages 5–8, 9–12, 17–20, 25–28, 41–44, 49–52, 61–64, 81–84, 89–92, 93–96, 97–100, 101–104, 117–120, 121–124, 125–128</p> |
| <p>2. Reason abstractly and quantitatively.</p> | <p>enVision Mathematics provides scaffolded instruction to help students develop both quantitative and abstract reasoning. In the Visual Learning Bridge, students can see how to represent a given situation numerically or algebraically. They will have opportunities later in the lesson to reason abstractly as they endeavor to represent situations symbolically. Reasonableness exercises remind students to compare their work to the original situation. Reasoning problems throughout the exercise sets focus students’ attention on the structure or meaning of an operation, for example, rather than merely the solution.</p> <p>Student’s Edition and Teacher’s Edition pages 9–12, 21–24, 45–48, 53–56, 61–64, 93–96, 97–100, 117–120, 121–124, 125–128, 129–132, 133–136, 141–144, 145–148, 149–152</p> |

| <p align="center">Louisiana Student Standards for Mathematics 2017 Grade 3</p> | <p align="center">enVision Mathematics Common Core ©2020 Grade 3</p> |
|---|---|
| <p>3. Construct viable arguments and critique the reasoning of others.</p> | <p>Consistent with a focus on reasoning and sense-making is a focus on critical reasoning—argumentation and critique of arguments. In enVision Mathematics, the Problem-Based Learning affords students opportunities to share with classmates their thinking about problems, their solution methods, and their reasoning about the solutions. Many exercises found throughout the program specifically call for students to justify or explain their solutions. The ability to articulate a clear explanation for a process is a stepping stone to critical analysis and reasoning of both the student's own processes and those of others.</p> <p>Student's Edition and Teacher's Edition pages 13-16, 25-28, 41-44, 45-48, 57-60, 61-64, 77-80, 101-104, 133-136, 141-144, 149-152, 173-176, 177-180, 189-192, 209-212</p> |
| <p>4. Model with mathematics.</p> | <p>Students using enVision Mathematics are introduced to mathematical modeling in the early grades. They first use manipulatives and drawings and then equations to model addition and subtraction situations. The Visual Learning Bridge and Visual Learning Animation Plus often present real-world situations, and students are shown how these can be modeled mathematically. In later grades, students expand their modeling skills to include representations such as tables and graphs, as well as equations.</p> <p>Student's Edition and Teacher's Edition pages 5-8, 9-12, 17-20, 21-24, 25-28, 61-64, 85-88, 93-96, 125-128, 137-140, 141-144, 181-184, 189-192, 221-224, 225-228</p> |

**A Correlation of enVision Mathematics Common Core ©2020
to the Louisiana Student Standards for Mathematics 2017**

| <p align="center">Louisiana Student Standards for Mathematics 2017 Grade 3</p> | <p align="center">enVision Mathematics Common Core ©2020 Grade 3</p> |
|---|---|
| <p>5. Use appropriate tools strategically.</p> | <p>Students become fluent in the use of a wide assortment of tools ranging from physical objects, including manipulatives, rulers, protractors, and even pencil and paper, to digital tools, such as Online Math Tools and computers. As students become more familiar with the tools available to them, they are able to begin making decisions about which tools are most helpful in a particular situation.</p> <p>Student's Edition and Teacher's Edition pages 13-16, 25-28, 49-52, 57-60, 81-84, 117-120, 181-184, 209-212, 233-236, 257-260, 317-320, 341-344, 353-356, 357-360, 381-384</p> |
| <p>6. Attend to precision.</p> | <p>Students are expected to use mathematical terms and symbols with precision. Key terms and concepts are highlighted in each lesson. The Problem-Based Learning activity provides repeated opportunities for students to use precise language to explain their solution paths while solving problems. In the Convince Me! feature, students revisit these key terms or concepts and provide explicit definitions or explanations.</p> <p>Student's Edition and Teacher's Edition pages 17-20, 49-52, 57-60, 77-80, 137-140, 145-148, 149-152, 169-172, 217-220, 233-236, 253-256, 61-264, 269-272, 305-308, 309-312</p> |

|---|---|
| <p>7. Look for and make use of structure.</p> | <p>Students are encouraged to look for structure as they develop solution plans. As students mature in their mathematical thinking, they look for structure in numerical operations by focusing on place value and properties of operations. This focus on looking for and recognizing structure enables students to draw from patterns as they formalize their thinking about the structure of operations.</p> <p>Student’s Edition and Teacher’s Edition pages 13–16, 25–28, 41–44, 45–48, 53–56, 77–80, 81–84, 85–88, 89–92, 101–104, 121–124, 129–132, 137–140, 169–172, 177–180</p> |
| <p>8. Look for and express regularity in repeated reasoning.</p> | <p>Students are prompted to look for repetition in computations to help them develop shortcuts and become more efficient problem solvers. Students are reminded to think about problems they have encountered previously that may share features or processes. They are encouraged to draw on the solution plan developed for such problems, and, as their mathematical thinking matures, to look for and apply generalizations to similar situations. The Problem-Based Learning activities offer students opportunities to look for regularity in the way operations behave.</p> <p>Student’s Edition and Teacher’s Edition pages 21–24, 53–56, 97–100, 101–104, 133–136, 145–148, 181–184, 185–188, 221–224, 225–228, 269–272, 293–296, 345–348, 353–356, 389–392</p> |
