<b>DISCIPLINARY CORE IDEA</b>	
<b>ESS2.C: The Roles of Water in Earth's Surface Processes</b> Variations in density due to variations in temperature and salinity drive a global pattern of interconnected ocean currents. <b>ESS2.D: Weather and Climate</b> • Weather and climate are influenced by interactions involving sunlight, the ocean, the atmosphere, ice, landforms, and living things. These interactions vary with latitude, altitude, and local and regional geography, all of which can affect oceanic and atmospheric flow patterns. • The ocean exerts a major influence on weather and climate by absorbing energy from the sun, releasing it over time, and globally redistributing it through ocean currents.	<b>SE/TE:</b> 248–254

<b>Developing and Using Models</b> Develop and use a model to describe phenomena.	<b>SE/TE:</b> 222–229 , 248–254
<b>CROSSCUTTING CONCEPT</b>
