**Introduction**

This document demonstrates how ***Pearson Integrated CME Project, Mathematics I ©2013*** meets the standards of the *Common Core State Standards for Mathematics, Appendix A, Integrated Pathway Mathematics I*. Correlation references are to the pages of the Student and Teacher's Editions.

The ***Integrated CME Project*** is an NSF-funded core mathematics program that was built for the Integrated Pathway of the Common Core State Standards. It includes content from algebra, geometry, as well as Precalculus concepts. The program's proven-effective pedagogy provides the focus, coherence, and rigor necessary to ensure today's students master the challenging new Common Core State Standards. The program also incorporates technology and hands-on projects and activities to engage today's digital students in deep mathematical learning.

***Integrated CME*** Content includes Mathematics I, Mathematics II, and Mathematics III. Each course is focused on big ideas. ***Integrated CME Project*** is organized by coherent chapters. Chapters are comprised of investigation. Each Investigation is then composed of 3-6 lessons. The basic mathematics of each Investigation is accessible to all, and each Investigation can ultimately challenge the best students. The students work from a more informal to formal understanding of the mathematical topic explored in that particular chapter. The Investigation wrap-up, called Mathematical Reflections, provides an opportunity to review and summarize at the end of the chapter—good preparation for the Next-Generation assessments that will require students to justify their conclusions and mathematical understandings in writing. A Chapter Project extends student understanding by presenting challenges and highlighting connections to additional topics—projects are great preparation for performance tasks that will be on the upcoming Next-Generation assessments.

This document demonstrates the high degree of success students will achieve by using ***Pearson Integrated CME Project, Mathematics I-III***.

<b>Unit 1: Relationships between Quantities</b>		
SKILLS TO MAINTAIN Reinforce understanding of the properties of integer exponents. The initial experience with exponential expressions, equations, and functions involves integer exponents and builds on this understanding.		
Reason quantitatively and use units to solve problems.  Working with quantities and the relationships between them provides grounding for work with expressions, equations, and functions.	N.Q.1 Use units as a way to understand problems and to guide the solution of multi-step problems; choose and interpret units consistently in formulas; choose and interpret the scale and the origin in graphs and data displays.	<b>SE/TE:</b> 174 (#3), 175, 210, 211 (#2), 231 (#1), 232 (#10-11), 257 (#1), 253-256, 257 (#1), 258-260, 261 (#16), 292-293, 343 (#1-2), 368 (#1), 369, 370 (#6-10), 488-489, 491 (#1, 3-4), 492 (#6-8), 494 (#12), 524 (#6), 525 (#8-9), 540 (#5-6), 541 (#11), 542 (#12), 549 (#10-12)
	N.Q.2 Define appropriate quantities for the purpose of descriptive modeling.	<b>SE/TE:</b> 253-256, 257 (#1), 258-261, 368 (#1), 369, 370 (#6-10), 536-538, 539-542, 543-545, 549 (#10-12)
	N.Q.3 Choose a level of accuracy appropriate to limitations on measurement when reporting quantities.	<b>SE/TE:</b> 488-490, 491-494, 495-499, 500-502, 503-506, 507-510, 511-514, 515-518, 519 (#12, 14-15), 523-524, 525 (#7-10), 528-531, 532-534, 535 (#10), 536-538, 539-541, 542 (#12), 543-545, 546-548, 549 (#9-10), 575, 576 (#11-13)

<p>Solve systems of equations.</p> <p><i>Build on student experiences graphing and solving systems of linear equations from middle school to focus on justification of the methods used. Include cases where the two equations describe the same line (yielding infinitely many solutions) and cases where two equations describe parallel lines (yielding no solution); connect to GPE.5, which requires students to prove the slope criteria for parallel lines.</i></p>	<p>A.REI.5 Prove that, given a system of two equations in two variables, replacing one equation by the sum of that equation and a multiple of the other produces a system with the same solutions.</p>	<p>For related content, please see: <b>SE/TE:</b> 300-305, 307 (#11, 13), 313-318, 319</p>
	<p>A.REI.6 Solve systems of linear equations exactly and approximately (e.g., with graphs), focusing on pairs of linear equations in two variables.</p>	<p><b>SE/TE:</b> 216 (#1-3), 217 (#7), 297, 299 (#9), 300-305, 307 (#11, 13), 311 (#12), 312 (#13), 313-318, 319</p>
<b>Unit 4: Descriptive Statistics</b>		
<p>Summarize, represent, and interpret data on a single count or measurement variable.</p> <p><i>In grades 6 – 8, students describe center and spread in a data distribution. Here they choose a summary statistic appropriate to the characteristics of the data distribution, such as the shape of the distribution or the existence of extreme data points.</i></p>	<p>S.ID.1 Represent data with plots on the real number line (dot plots, histograms, and box plots).</p>	<p><b>SE/TE:</b> 488-489, 491 (#1, 3-4), 492 (#6-8), 493 (#10), 494 (#12), 495-499, 500 (#4), 501 (#9), 495-499, 520 (#1, 3)</p>
	<p>S.ID.2 Use statistics appropriate to the shape of the data distribution to compare center (median, mean) and spread (interquartile range, standard deviation) of two or more different data sets.</p>	<p><b>SE/TE:</b> 481-487, 489 (#4), 490 (#6), 491 (#2, 4), 492 (#7), 493 (#11), 494 (#13-14), 495-498, 499 (#1), 500 (#2-7), 501 (#9)</p>
	<p>S.ID.3 Interpret differences in shape, center, and spread in the context of the data sets, accounting for possible effects of extreme data points (outliers).</p>	<p><b>SE/TE:</b> 488 (#2), 493 (#11), 495-499, 500-501, 536</p>

<b>Unit 5: Congruence, Proof, and Constructions</b>		
<p>Experiment with transformations in the plane.</p> <p><i>Build on student experience with rigid motions from earlier grades. Point out the basis of rigid motions in geometric concepts, e.g., translations move points a specified distance along a line parallel to a specified line; rotations move objects along a circular arc with a specified center through a specified angle.</i></p>	G.CO.1 Know precise definitions of angle, circle, perpendicular line, parallel line, and line segment, based on the undefined notions of point, line, distance along a line, and distance around a circular arc.	<b>SE/TE:</b> 35, 36 (#5-6, 8-9), 279-280, 587-588, 589-591, 607-608, 608 (#1), 609 (#7), 607, 659 (#2), 660 (#6-7), 664 (#6-7), 669 (#1-3), 669 (Theorem 8.4), 674 (Theorem 8.5)
	G.CO.2 Represent transformations in the plane using, e.g., transparencies and geometry software; describe transformations as functions that take points in the plane as inputs and give other points as outputs. Compare transformations that preserve distance and angle to those that do not (e.g., translation versus horizontal stretch).	For related content, please see: <b>SE/TE:</b> 189-194, 621-623, 624-630, 631-638, 639-647, 659, 660 (#6-7)
	G.CO.3 Given a rectangle, parallelogram, trapezoid, or regular polygon, describe the rotations and reflections that carry it onto itself.	For related content, please see: <b>SE/TE:</b> 639-647
	G.CO.4 Develop definitions of rotations, reflections, and translations in terms of angles, circles, perpendicular lines, parallel lines, and line segments.	For related content, please see: <b>SE/TE:</b> 621-623, 624-627, 631-638, 639 (#9-12), 640-643, 644-646
	G.CO.5 Given a geometric figure and a rotation, reflection, or translation, draw the transformed figure using, e.g., graph paper, tracing paper, or geometry software. Specify a sequence of transformations that will carry a given figure onto another.	For related content, please see: <b>SE/TE:</b> 621-623, 624-627, 631-638, 639-646, 661 (#11)

<p>Understand congruence in terms of rigid motions.</p> <p><i>Rigid motions are at the foundation of the definition of congruence. Students reason from the basic properties of rigid motions (that they preserve distance and angle), which are assumed without proof. Rigid motions and their assumed properties can be used to establish the usual triangle congruence criteria, which can then be used to prove other theorems.</i></p>	<p>G.CO.6 Use geometric descriptions of rigid motions to transform figures and to predict the effect of a given rigid motion on a given figure; given two figures, use the definition of congruence in terms of rigid motions to decide if they are congruent.</p>	<p><b>SE/TE:</b> 648-652, 653-655</p>
	<p>G.CO.7 Use the definition of congruence in terms of rigid motion to show that two triangles are congruent if and only if corresponding pairs of sides and corresponding pairs of angles are congruent.</p>	<p><b>SE/TE:</b> 616 (#1-4), 617 (#8-12), 648-652, 653-655</p>
	<p>G.CO.8 Explain how the criteria for triangle congruence (ASA, SAS, and SSS) follow from the definition of congruence in terms of rigid motions.</p>	<p><b>SE/TE:</b> 616 (#1-4), 617 (#5-12), 648-652, 653-655</p>
<p>Make geometric constructions.</p> <p><i>Build on prior student experience with simple constructions. Emphasize the ability to formalize and defend how these constructions result in the desired objects.</i></p> <p><i>Some of these constructions are closely related to previous standards and can be introduced in conjunction with them.</i></p>	<p>G.CO.12 Make formal geometric constructions with a variety of tools and methods (compass and straightedge, string, reflective devices, paper folding, dynamic geometric software, etc.). <i>Copying a segment; copying an angle; bisecting a segment; bisecting an angle; constructing perpendicular lines, including the perpendicular bisector of a line segment; and constructing a line parallel to a given line through a point not on the line.</i></p>	<p><b>SE/TE:</b> 575-576, 577-580, 580 (#1), 581-583, 584-585, 587-588, 589-591, 593-594, 596 (#10)</p>
	<p>G.CO.13 Construct an equilateral triangle, a square, and a regular hexagon inscribed in a circle.</p>	<p><b>SE/TE:</b> 592-593, 596 (#14), 597 (#1)</p>
