Scott Foresman • Addison Wesley  
en**VISION**MATH™

to the

# New Jersey Model Curriculum Grades K-6

# A Correlation of Scott Foresman–Addison Wesley enVisionMATH ©2011 to the New Jersey Model Curriculum

## Introduction

This correlation shows the alignment between **Scott Foresman–Addison Wesley enVisionMATH**, ©2011, to the New Jersey Model Curriculum for grades K-6. Lessons in the Teacher’s Edition include facsimile pages of the Student Edition. References to *Interactive Lesson Support for English Language Learners* are also included. *Interactive Lesson Support for English Language Learners* is a lesson-by-lesson companion to **Scott Foresman– Addison Wesley enVisionMATH** and **Scott Foresman–Addison Wesley enVisionMath en español**. It has been designed to provide manageable support for teachers and their students who are challenged by language issues in Mathematics, no matter what their first language may be. The **enVisionMATH™** program is based around scientific research on how children learn mathematics as well as on classroom-based evidence that validates proven reliability.

### Personalized Curriculum

**enVisionMATH** provides 20 focused topics, (16 in Kindergarten), that are coherent, digestible groups of lessons focusing on one or a few related content areas. A flexible sequence of topics is small enough for a district to rearrange into a personalized curriculum that matches the sequence preferred by the district. The curriculum is designed so that all standards can be taught before the major mathematics testing.

### Instructional Design

**enVisionMATH** teaches for deep conceptual understanding using research-based best practices. Essential understandings connected by Big Ideas are explicitly stated in the Teacher’s Edition. Daily Spiral Review and the Problem of the Day focus foundational skills and allow for ongoing practice with a variety of problem types. Daily interactive concept development encourages students to interact with teachers and other students to develop conceptual understanding.

Visual Learning allows students to benefit from seeing math ideas portrayed pictorially as well as being able to see connections between ideas. **enVisionMATH** created a Visual Learning Bridge which is a step-by-step bridge between the interactive learning activity and the lesson exercises to help students focus on one idea at a time and see the connections within the sequence of ideas. The strong sequential visual/verbal connections deepen conceptual understanding for students of all learning modalities and are particularly effective with English language learners and struggling readers. Guiding questions in blue type help the teacher guide students through the examples, ask probing questions to stimulate higher order thinking, and allow for checking of understanding.

### Differentiated Instruction

**enVisionMATH** engages and interests all students with leveled activities for ongoing differentiated instruction. A Teacher-Directed Intervention activity at the end of every lesson provides immediate opportunities to get students on track. In addition, ready made leveled learning centers for each lesson allow different students to do the same activity at different levels at the same time giving the teacher uninterrupted time to focus on re-teaching students who require intervention. All centers can be used repeatedly due to the inclusion of a “Try Again” at the end. They can also be used for ongoing review and they can be used year after year. Topic-specific considerations for EL, Special Education, At-Risk, and Advanced students enable the teacher to accommodate the diverse learners in the classroom.
